SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	12/21/2006	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

**Office Action Summary**

Application No.

10/606,714

Applicant(s)

ROBERTSON ET AL.

Examiner

Mary Kate B. Baran

Art Unit

2857

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 29 November 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8 and 10-17 is/are pending in the application.
- 4a) Of the above claim(s) 18-75 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 and 10-17 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 June 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 29 November 2006.
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- ☐ Notice of Informal Patent Application
- ☐ Other: \_\_\_\_\_.

## **DETAILED ACTION**

### ***Response to Amendment***

1. The action is responsive to the Amendment filed on 29 November 2006. Claims 1-8 and 10-17 are pending. Claims 1-8 and 10-17 are amended. Claim 9 is cancelled. Claims 18-75 are withdrawn.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 and 10-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vogley (U.S. Patent No. 6,617,872) in view of Hawkins et al. (U.S. PG-Pub. No. US2003/0130969) (hereinafter Hawkins).

Referring to claim 1, Vogley teaches an electronic system (see Vogley, column 2 line 57 – column 3 line 6 and Figure 1) comprising: a host controller configured to execute an operating system and one or more management agents (see Vogley, column 3 lines 17-20); a plurality of components configured to provide functionality for the electronic system (see Vogley, column 3 lines 7-16); and a system for margin testing one or more of the components of the electronic system (see Vogley, column 4 lines 1-2), the margin system comprising: a controller (see Vogley, column 3 lines 36-39 and Figure 1 "microprocessor 44,45"); and a digital parameter adjuster in

communication with said controller and with selected ones of said components (see Vogley, column 4 lines 39-51), said adjuster setting at least one operating parameter associated with at least one of said components to one or more test values in response to commands from said controller (see Vogley, column 4 lines 39-51 and column 6 lines 15-20), but does not expressly teach that the controller is a baseboard management controller that is configured to monitor a response of said electronic system to said test values.

Hawkins teaches a baseboard management controller that is configured to monitor a response of said electronic system to said test values (see Hawkins, page 2 paragraphs [0015] and [0017]-[0018]).

It would have been obvious at the time the invention was made to one of ordinary skill in the art to modify Vogley to include the teachings of Hawkins because adding a baseboard management controller would have allowed the skilled artisan to provide intelligence to the platform management as well as managing the interface between system management software and the platform management hardware, providing autonomous monitoring, event logging, and recovery control and serves as the gateway between system management software and a management bus (see Hawkins, page 2 paragraph [0015]).

Referring to claim 2, Vogley teaches a hardware monitor in communication with said controller and said components to receive information from said components in

Art Unit: 2857

response to said test values and to transmit said received information to the controller (see Vogley, column 4 lines 46-51 and column 5 lines 1-19).

Referring to claim 3, Vogley teaches a diagnostics software for collecting data regarding response of the electronic system to said test values of the operating parameter (see Vogley, column 3 lines 17-32).

Referring to claim 4, Vogley teaches that said controller executes said diagnostics software (see Vogley, column 3 lines 17-32).

Referring to claim 5, Vogley teaches that said controller transmits software command signals to said parameter adjuster to effect variation of said operating parameter (see Vogley, column 5 lines 1-19 and column 6 lines 15-20).

Referring to claim 6, Vogley teaches that said operating parameter is a frequency applied to one or more of said selected components (see Vogley, column 4 lines 30-31).

Referring to claim 7, Vogley teaches at least one communications bus for coupling said controller to said parameter adjuster and said hardware monitor (see Vogley, column 6 lines 39-47).

Referring to claim 8, Vogley teaches that said controller implements management of said components of the electronic system (see Vogley, column 1 lines 30-39).

Referring to claims 10-12 and 17, Vogley teaches all the features of the claimed invention except that said controller is a Baseboard Management Controller (BMC); that the BMC implements Intelligent Platform Management Interface (IPMI) protocol; that the communication bus is a I<sup>2</sup>C-based bus; that said I<sup>2</sup>C-based bus is an IPMB bus; and that said computer system is a computer server.

Hawkins teaches that said controller is a Baseboard Management Controller (BMC) (see Hawkins, page 2 [0015]-[0017]); that the BMC implements Intelligent Platform Management Interface (IPMI) protocol (see Hawkins, pages 1-2 [0014]); that the communication bus is a I<sup>2</sup>C-based bus (see Hawkins, page 1 [0006]); that said I<sup>2</sup>C-based bus is an IPMB bus (see Hawkins, page 1 [0013]); and that said computer system is a computer server (see Hawkins, page 1 [0004]).

It would have been obvious at the time the invention was made to one of ordinary skill in the art to modify Vogley to include the teachings of Hawkins because adding a baseboard management controller would have allowed the skilled artisan to provide intelligence to the platform management as well as managing the interface between system management software and the platform management hardware, providing autonomous monitoring, event logging, and recovery control and serves as the gateway

between system management software and a management bus (see Hawkins, page 2 paragraph [0015]).

Referring to claim 13, Vogley teaches that said parameter adjuster is a digital programmable frequency synthesizer (see Vogley, column 4 lines 39-43).

Referring to claim 14, Vogley teaches that said frequency synthesizer receives an input reference clock signal and, in response to a command signal from said controller, generates an output clock signal as a multiple of said input clock signal (see Vogley, column 3 lines 7-16).

Referring to claim 15, Vogley teaches that said frequency synthesizer applies said output clock signal to one or more of said selected components for testing thereof (see Vogley, column 3 lines 7-16).

Referring to claim 16, Vogley teaches that said electronic system comprises a computer system (see Vogley, column 2 line 57 – column 3 line 6).

### ***Response to Arguments***

3. Applicant's arguments filed 29 November 2006 have been fully considered but they are not persuasive.

Applicant argues that Vogley does not teach, "an electronic system, comprising: a host controller configured to execute an operating system and one or more management agents; a plurality of components configured to provide functionality for the electronic system; and a margin testing system for margin testing one or more of the components of the electronic system"; however, Applicant's arguments are not well taken. Vogley teaches an electronic system (see Vogley, Figure 1 "integrated circuit device test arrangement 20"), comprising: a host controller (see Vogley, Figure 1 "PC/Workstation 55") configured to execute an operating system and one or more management agents (see Vogley, column 3 lines 17-20); a plurality of components configured to provide functionality for the electronic system (see Vogley, column 3 lines 7-16 and Figure 1); and a margin testing system for margin testing one or more of the components of the electronic system (see Vogley, column 4 lines 1-2 and Figure 1 "microprocessor 44,45").

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, it would have been obvious at the time the invention was made to one of ordinary skill in the art to modify Vogley to include the teachings of Hawkins because adding a baseboard

Art Unit: 2857

management controller would have allowed the skilled artisan to provide intelligence to the platform management as well as managing the interface between system management software and the platform management hardware, providing autonomous monitoring, event logging, and recovery control and serves as the gateway between system management software and a management bus (see Hawkins, page 2 paragraph [0015]).

### ***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary Kate B. Baran whose telephone number is (571) 272-2211. The examiner can normally be reached on Monday - Friday from 9:00 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marc S. Hoff can be reached on (571) 272-2216. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2857

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
